

# OSTEO-DOC AI BASED OSTEOARTHRITIS GRADING AND EXERCISE MANAGEMENT

## ABSTRACT

VARIOUS DEEP LEARNING MODELS ARE BEING USED FOR AUTONOMOUS DETECTION OF DISEASES. OSTEOARTHRITIS HAS BEEN DETECTED AS THE MOST COMMON FORM OF ARTHRITIS, THEREFORE WE HAVE PROPOSED A TRI-WEIGHTAGE CLASSIFICATION MODEL I.E., A HYBRID APPROACH FOR GRADING OSTEOARTHRITIS USING X-RAY IMAGES, KOOS QUESTIONNAIRE AND FLEXION ANGLE AS A SOLUTION FOR EVALUATION OF KNEE OSTEOARTHRITIS.

## OBJECTIVES

- DEVELOP ANDROID APP FOR TRI-WEIGHTAGE CLASSIFICATION
  - X-RAY GRADING USING AI MODEL
  - KOOS QUESTIONNAIRE
  - VIRTUAL GONIOMETER
- GENERATION OF PROGRESS REPORTS

## ACCOMPLISHMENTS

- FICS FINAL STAGE
- PAPER PUBLISHED IN ICODT2 (BEST PAPER OF THE SESSION)
